

AMENDMENTS TO THE SPECIFICATION

Please amend the specification as follows:

Please replace the paragraph beginning at page 4, line 19, with the following amended paragraph:

the composition preferably containing at least one of (B) and (C) and preferably being essentially free of any material that would soil or stain fabric under usage conditions, and/or preferably having a pH of more than about 3, more preferably more than about 3.5. Further, the composition of the present invention may have a pH of from about 3 to about 11, preferably from about 4 to about 9, more preferably from about 5 to about 6.5, and a viscosity of less than about 100 cP, more preferably of less than about 50 cP, more preferably less than about 15 cP.

Please replace the paragraph beginning at page 10, line 17, with the following amended paragraph:

The surfactant for use in providing the required low surface tension in the composition of the present invention should be cyclodextrin-compatible, that is it should not substantially form a complex with the cyclodextrin so as to diminish performance of the cyclodextrin and/or the surfactant. Complex formation diminishes both the ability of the cyclodextrin to absorb odors and the ability of the surfactant to lower the surface tension of the aqueous composition. Surfactants suitable for use herein can be a nonionic surfactant, an ionic surfactant, a zwitterionic surfactant, a fluorocarbon surfactant, and mixtures thereof.

Please replace the paragraph beginning at page 26, line 9, with the following amended paragraph:

A fabric wrinkle control agent, preferably selected from the group consisting of: fiber lubricant, shape retention polymer, hydrophilic plasticizer, lithium salt, fabric care saccharides and mixtures thereof, may also be incorporated into the compositions of the present invention. Preferably the fabric wrinkle control agent, like the other ingredients, are cyclodextrin-compatible. Nonlimiting examples of fabric wrinkle control agents are silicones, synthetic solid particles (e.g., Velustrol P-40 oxidized polyethylene emulsion available from Clariant), mono- and polycarboxylic acids, acrylates, acrylamides, esters, amides and imides of carboxylic acids, starches and their derivatives, chitins and their derivatives. The fabric wrinkle control agent also include polymers comprising carboxylic acid moieties; such polymers include silicone graft copolymers, silicone block copolymers, and mixtures thereof. The fabric care saccharides include fabric care polysaccharides, fabric care oligosaccharides and mixtures thereof.
